

CRYSTAL PALACE BRIDGE WDW – ORLANDO, FL

PROJECT PROFILE

Tropical Forest Products Cumaru's natural durability in harsh tropical climates made it a natural choice when WDW Engineering went looking for a bridge decking material that would stand up to the elements as well as the millions of visitors that will inevitably make the crossing. Custom profiled with WDW's unique grooved profile. Natural resistance to wear, rot, termites and fire combined with ADA compliant slip resistance and the ability to source large dimensions in single length make Cumaru the ideal "Or Equal" species to Ipe for Commercial Bridge Deck Applications.

TECHNICAL/ENVIRONMENTAL LEAD: Brian Lotz
