

**PENN STATE STEINY-D CONEY ISLAND RE USED
TRELLIS**

PROJECT PROFILE

“In a very cool example of sustainable adaptive reuse, the new wooden trellis outside Steiny-D is made of salvaged wood from the recent, pre-Sandy reconstruction of the Coney Island boardwalk. Architect David Hollenberg says that the Ipe wood is a serious improvement on the cedar that preceded it, which basically got destroyed by the charming climbing wisteria vines that gave the trellis its romantic whimsy.”

Rachel Zurier – Under The Button
