

TFP ProDeck EPDM Pedestal Sell Sheet

Pedestal Options

Tropical Forest Products offers several pedestal options based on surface and elevation requirements.

Tropical Forest Products pedestals can be utilized for projects that require roof to deck surface tile elevation heights from 1-11/16" up to 36". Tropical Forest Products pedestals include features that add greatly to performance, ease of installation, and stability including pressure fit connection, post installation elevation adjustment and self-leveling technologies.

Tropical Forest Products EPDM Rubber Pedestal

The TFP ProDeck EPDM Rubber Pedestal is a flexible deck tile connection support that allows tiles to follow the natural contour of the roof and water to flow freely underneath the deck tiles. This 3/16" fixed height pedestal incorporates spacer tabs and pressure fit connection pin technology. The flexible EPDM rubber is highly durable, and is safe for direct contact with any roof surface. TFP ProDeck EPDM pedestals provide sound deadening and cushioned support of deck tiles. This pedestal is not stackable and must be considered for low elevation support requirements only. Pedestals are scored and can be easily cut with a razor knife or scissors into halves or quarters to facilitate perimeter and corner placement.
